

BedForge QC — Blueprint Intelligence

Blueprint Assessment Pack

Internal verification artifact. Compare side-by-side with plant shop drawings. Prestressed plant branding is secondary.

A. Cover / identity

Controlled fail reasons

- Critical fields require manual verification before lock: overall_depth_in.

B. Critical identity

Large first-pass identity for plant-job comparison (Job L25390 / CID / Type 2 / marks / lengths). Schema-absent keys are listed explicitly so missing DNA is visible.

Job number (job_number)	L25390	high	confirmed	1	source=text_layer+ocr. Job number from JOB NO / L-number pattern.
CID (cid)	25-5390	high	confirmed	1	source=text_layer+ocr. CID from title block.
Beam mark (compact) (beam_mark)	201-209	high	confirmed	1	source=text_layer+ocr. Multi-beam identity compacted from beam_marks.
Beam marks (all) (beam_marks)	["201", "202", "203", "204", "205", "206", "207", "208", "209"]	high	confirmed	1	source=text_layer+ocr. Beam marks expanded from MARK/MK groups and ranges.
Product family / beam type (product_family)	i_beam	high	confirmed	1	source=text_layer+ocr. Type 2 / I-beam / FIB family callout.

County / DOT (county_dot)	Larue County, Kentucky	high	confirmed	1	source=text_layer+ocr. County/state identity from title block.
Bridge ID (bridge_id)	062B00034R	high	confirmed	1	source=text_layer+ocr. Bridge ID from title block.
Route (route)	KY 210	high	confirmed	1	source=text_layer+ocr. Route identifier from title block.
Overall length (overall_length_ft)	52.0	high	confirmed	7	source=text_layer+ocr. Primary overall length is the longest mark family; see mark_length_families for all groups.
Casting length (casting_length_ft)	—	low	unconfirmed	—	Casting length not confidently located.
Mark length families (mark_length_families)	{{"marks": ["201", "202", "203"], "overall_display": "47'-3\"", "casting_display": null, "overall_length_ft": 47.25, "casting_length_ft": null, "source_page": 7}, {"marks": ["204", "205", "206"], "overall_display": "52'-0\"", "casting_display": null, "overall_length_ft": 52.0, "casting_length_ft": null, "source_page": 8}, {"marks": ["207", "208", "209"], "overall_display": "47'-3\"", "casting_disp...	high	confirmed	7	source=text_layer+ocr. Per-mark overall/casting length families from shop sheets.
Depth (overall_depth_in)	—	low	unconfirmed	—	Overall depth/height not confidently located.
Strand diameter (strand_diameter_in)	0.5	high	confirmed	4	source=text_layer+ocr. Strand diameter from 1/2" or 0.5" callout.
Strand grade (strand_grade)	270K	high	confirmed	4	source=text_layer+ocr. Strand grade / relaxation from 270K callout.
Strand final pull (strand_final_pull_lb)	—	low	unconfirmed	—	Strand final pull not confidently located.
Hold-down type (hold_down_type)	H-56-S	high	confirmed	5	source=text_layer+ocr. Hold-down type from hardware callout.
Lift-loop spec (lift_loop_spec)	0.6" triple lift loops, embed 2-7	high	confirmed	10	source=text_layer+ocr. Lift-loop spec from hardware callout. Count not invented.

C. Full field inventory

Every FIELD_GROUPS key currently known to Blueprint Intelligence, including empty and not-applicable fields.

C1. Title Block / Identity (title_block)

job_number	L25390	high	confirmed	1	source=text_layer+ocr. Job number from JOB NO / L-number pattern.
cid	25-5390	high	confirmed	1	source=text_layer+ocr. CID from title block.
bridge_id	062B00034R	high	confirmed	1	source=text_layer+ocr. Bridge ID from title block.
route	KY 210	high	confirmed	1	source=text_layer+ocr. Route identifier from title block.
project_name	ING REBAR)	high	confirmed	7	source=text_layer+ocr. Project name from labeled field.
county_dot	Larue County, Kentucky	high	confirmed	1	source=text_layer+ocr. County/state identity from title block.
sheet_number	—	low	unconfirmed	—	Sheet number not confidently located.
revision	e	high	confirmed	4	source=text_layer+ocr. Revision from labeled field.
beam_mark	201-209	high	confirmed	1	source=text_layer+ocr. Multi-beam identity compacted from beam_marks.
beam_marks	["201", "202", "203", "204", "205", "206", "207", "208", "209"]	high	confirmed	1	source=text_layer+ocr. Beam marks expanded from MARK/MK groups and ranges.
product_family	i_beam	high	confirmed	1	source=text_layer+ocr. Type 2 / I-beam / FIB family callout.
overall_length_ft	52.0	high	confirmed	7	source=text_layer+ocr. Primary overall length is the longest mark family; see mark_length_families for all groups.
casting_length_ft	—	low	unconfirmed	—	Casting length not confidently located.
mark_length_families	[{"marks": ["201", "202", "203"], "overall_display": "47'-3\"", "casting_display": null, "overall_length_ft": 47.25, "casting_length_ft": null, "source_page": 7}, {"marks": ["204", "205", "206"], "overall_display": "52'-0\"", "casting_display": null, "overall_length_ft": 52.0, "casting_length_ft": null, "source_page": 8}, {"marks": ["207", "208", "209"], "overall_display": "47'-3\"", "casting_display": null, "overall_length_ft": 47.25, "casting_length_ft": null, "source_page": 9}]	high	confirmed	7	source=text_layer+ocr. Per-mark overall/casting length families from shop sheets.
design_camber_in	—	low	unconfirmed	—	Design camber note not clearly stated.

finish_notes	—	low	unconfirmed	—	Finish notes present in drawing text; verify manually.
--------------	---	-----	-------------	---	--

C2. Geometry (geometry)

overall_depth_in	—	low	unconfirmed	—	Overall depth/height not confidently located.
top_flange_width_in	—	low	unconfirmed	—	Top flange width not confidently located.
top_flange_thickness_in	—	low	unconfirmed	—	Top flange thickness not confidently located.
bottom_flange_width_in	—	low	unconfirmed	—	Bottom flange width not confidently located.
bottom_flange_thickness_in	—	low	unconfirmed	—	Bottom flange thickness not confidently located.
web_thickness_in	—	low	unconfirmed	—	Web thickness not confidently located.
outer_width_in	—	low	not_applicable	—	source=text_layer. Not required for I-beam translation unless the drawing explicitly calls it out.
outer_depth_in	—	low	not_applicable	—	source=text_layer. Not required for I-beam translation unless the drawing explicitly calls it out.
wall_thickness_in	—	low	not_applicable	—	source=text_layer. Not required for I-beam translation unless the drawing explicitly calls it out.
void_width_in	—	low	not_applicable	—	source=text_layer. Not required for I-beam translation unless the drawing explicitly calls it out.
void_depth_in	—	low	not_applicable	—	source=text_layer. Not required for I-beam translation unless the drawing explicitly calls it out.
special_end_geometry	—	low	unconfirmed	—	Special end geometry/end-detail notes present; verify manually.

C3. Strand System (strand_system)

strand_count	—	low	unconfirmed	—	Strand count not confidently located.
strand_diameter_in	0.5	high	confirmed	4	source=text_layer+ocr. Strand diameter from 1/2" or 0.5" callout.
strand_grade	270K	high	confirmed	4	source=text_layer+ocr. Strand grade / relaxation from 270K callout.
strand_final_pull_lb	—	low	unconfirmed	—	Strand final pull not confidently located.
strand_area_in2	—	low	unconfirmed	—	Strand area not confidently located.
strand_pattern_rows	—	low	unconfirmed	—	Value was not confidently located.

straight_strand_count	—	low	unconfirmed	—	Straight strand count not clearly stated.
draped_strand_count	—	low	unconfirmed	—	Draped strand count not clearly stated.
hold_downs	—	low	unconfirmed	—	No deterministic hold-down station callouts were found in extractable text.
hold_down_type	H-56-S	high	confirmed	5	source=text_layer+ocr. Hold-down type from hardware callout.
jacking_force_kip	—	low	unconfirmed	—	Jacking force note not confidently located.
target_elongation_in	—	low	unconfirmed	—	Target elongation note not confidently located.
debond_notes	—	low	unconfirmed	—	Debonded or shielded strand notes present; verify manually.

C4. Hardware (hardware)

lift_loops	—	low	unconfirmed	—	No deterministic lift loop station callouts were found in extractable text.
lift_loop_spec	0.6" triple lift loops, embed 2-7	high	confirmed	10	source=text_layer+ocr. Lift-loop spec from hardware callout. Count not invented.
inserts	[{"type": "F-64"}]	high	confirmed	10	source=text_layer+ocr. F-64 insert callout captured without inventing quantity.
tubes	—	low	unconfirmed	—	No deterministic tube station callouts were found in extractable text.
tie_rod_openings	—	low	unconfirmed	—	No deterministic tie-rod opening station callouts were found in extractable text.
drain_holes	—	low	unconfirmed	—	No deterministic drain hole station callouts were found in extractable text.
stirrups	—	low	unconfirmed	—	Stirrup spacing not confidently located.
plates_and_clips	Plate, clip, or bearing notes present; verify manually.	medium	unconfirmed	10	source=text_layer+ocr. Keyword hit only; verify exact wording against source.
grout_grooves	—	low	not_applicable	—	source=text_layer. Not required for I-beam translation unless the drawing explicitly calls it out.
bituminous_ends	—	low	unconfirmed	—	Bituminous or cut-off pocket treatment noted; verify manually.

C5. Ends, QC & Finishes (ends_and_qc)

|--|--|--|--|--|--|

marked_end_rule	{"label": "", "end": "start"}	medium	confirmed	8	source=text_layer+ocr. Marked-end rule from labeled note.
end_elevation_notes	—	low	unconfirmed	—	End elevation note present; verify manually.
paint_id_requirements	Paint or ID marking note present; verify manually.	medium	unconfirmed	1	source=text_layer+ocr. Keyword hit only; verify exact wording against source.
dimensional_tolerances	—	low	unconfirmed	—	Tolerance note present; verify manually.
special_inspection_notes	Special inspection note present; verify manually.	medium	unconfirmed	1	source=text_layer+ocr. Keyword hit only; verify exact wording against source.

D. Missing / weak fields

CRITICAL_FIELDS that are empty, low-confidence, or UNCONFIRMED. These block or weaken lock / twin use.

• **overall_depth_in — value=— | conf=low | status=unconfirmed | page=— | Overall depth/height not confidently located.**

Other empty / unconfirmed / low-confidence fields

- bituminous_ends [unconfirmed/low] page=— value=—
- bottom_flange_thickness_in [unconfirmed/low] page=— value=—
- bottom_flange_width_in [unconfirmed/low] page=— value=—

- web_thickness_in [unconfirmed/low] page=— value=—

Schema gaps vs L25390-class shop drawings (not extracted today)

- bed layout / bulkhead stations (still plant-setup, not twin DNA)
- invented hardware quantities (intentionally omitted unless BOM text is explicit)

E. Page text evidence appendix

Sparse/empty text pages are rasterized and OCR'd (pytesseract). Field notes label source as text_layer, ocr, or text_layer+ocr.

F. Twin DNA readiness

Fields that would currently drive a 3D twin after lock via `normalize_locked_blueprint()`. Draft extractions do not render a production twin until Verify & Lock.

Twin lock state	NOT LOCKED — twin stays draft/legacy until lock
Normalized length	52.0
Cross-section keys	["bottom_flange_thickness_in", "bottom_flange_width_in", "overall_depth_in", "top_flange_thickness_in", "top_flange_width_in", "web_thickness_in"]
Strand pattern rows	0
Lift loops / hold-downs	0 / 0
Locked revision id	—

Would drive twin today (extracted + confirmed/manually_confirmed)

- `product_family` — Selects I-beam vs box-beam cross-section family
- `overall_length_ft` — Twin length (`normalized_blueprint.length`)
- `inserts` — Insert stations
- `marked_end_rule` — Marked-end label
- `strand_diameter_in` — Tension reference diameter
- `strand_grade` — 270K / low-relaxation identity
- `hold_down_type` — Hold-down hardware type (H-56-S)
- `lift_loop_spec` — Lift-loop specification (no invented counts)
- `beam_marks` — Multi-beam DNA mark list
- `mark_length_families` — Per-mark overall/casting length families

Required twin inputs still missing or unconfirmed

- `overall_depth_in` — I-beam overall depth
- `top_flange_width_in` — I-beam top flange width
- `top_flange_thickness_in` — I-beam top flange thickness
- `bottom_flange_width_in` — I-beam bottom flange width
- `bottom_flange_thickness_in` — I-beam bottom flange thickness
- `web_thickness_in` — I-beam web thickness
- `strand_pattern_rows` — Strand row DNA (else invented from counts)
- `strand_count` — Fallback strand count
- `straight_strand_count` — Fallback straight-row count
- `draped_strand_count` — Drape profile + draped row
- `hold_downs` — Hold-down stations / drape low points
- `lift_loops` — Lift-loop stations
- `tubes` — Tube stations
- `tie_rod_openings` — Tie-rod stations
- `drain_holes` — Drain stations
- `stirrups` — Stirrup spacing (regions not modeled)
- `bituminous_ends` — Bituminous / cutoff pockets
- `jacking_force_kip` — Tension reference jacking force
- `target_elongation_in` — Tension reference elongation
- `strand_area_in2` — Tension reference area
- `strand_final_pull_lb` — Final pull (lb) into tension reference
- `casting_length_ft` — Casting length for bed setup

Normalized DNA snapshot (what lock would persist)
